

Objective:

Create a python program that keeps track of job applications and allows for the export to either of the following format: pdf, excel, csv.

The program should be expandable, follow pep8 guidelines:

<https://www.python.org/dev/peps/pep-0008/>, and saved in Git.

Data:

The dimensions should include whether the person applied, company name, website, job title, link to application(link), resume, accompanying files.

Note:

This code should be clean, and professionally written.
